

Static Friction

Both surfaces are “rough”
on a microscopic scale

Molecular bonds produce a
force tangent to the surface

Two surfaces
in contact

Very few points
are actually
in contact.

Molecular bonds form
between the two
materials. The molecular
springs pull and push
tangential to the surface,
providing the static
friction force.

Static Friction

Static Friction

Static Friction

Static friction is opposite the push to prevent motion.

\vec{F}_{push} is balanced by \vec{f}_s and the box does not move.

As \vec{F}_{push} increases, \vec{f}_s grows . . .

. . . until f_s reaches $f_{s \text{ max}}$. Now, if \vec{F}_{push} gets any bigger, the object will start to move.

Static Friction

\vec{F}_{push} is balanced by \vec{f}_s and the box does not move.

As \vec{F}_{push} increases, \vec{f}_s grows . . .

. . . until f_s reaches $f_{s \text{ max}}$. Now, if \vec{F}_{push} gets any bigger, the object will start to move.

Static friction has a maximum possible size $f_{s \text{ max}}$

$$f_{s \text{ max}} = \mu_s n$$

Question #23

A box with a weight of 100 N is at rest. It is then pulled by a 30 N horizontal force.

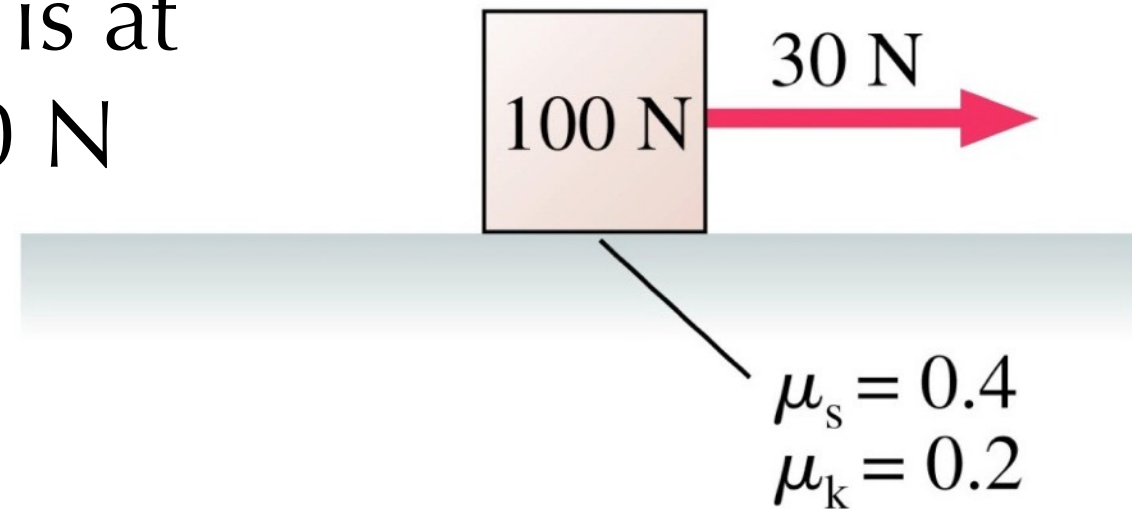

Does the box move?

- a) Yes
- b) No
- c) Not enough information to say.

Quiz

A box with a weight of 100 N is at rest. It is then pulled by a 30 N horizontal force.

Does the box move?

a) Yes

b) No

$$30 \text{ N} < f_{s \text{ max}} = 40 \text{ N}$$

c) Not enough information to say.

Question #24

A brick is resting on a rough incline as shown in the figure, the friction force acting on the brick is?

- a) equal to the weight (mg) of the brick.
- b) greater than the weight of the brick.
- c) zero
- d) less than the weight of the brick.

Question #25

A packing crate rests on a horizontal surface. It is acted on by three forces: 600 N to the left, 200 N to the right, and friction. If the 600 N force is removed, the new net force on the crate is?

- a) zero
- b) 200 N to the left
- c) 200 N to the right
- d) 400 N to the left

Static friction problem #1

A 1.0 kg wood block is pressed against a vertical wood wall by a 12 N force. The coefficient of static friction between the block and the wall is 0.5. If the block is initially at rest, will it move upward, move downward, or stay at rest?

Static Friction problem #2.

A 15 kg box is placed on a 30 degree incline. The coefficient of static friction between the box and the incline is 0.7. A 10 N force is exerted horizontally on the box. Will the box move? If so, in which direction?

Kinetic Friction

$$f_k = \mu_k N$$

The direction of the kinetic friction force is opposite the velocity.

Question #26

A box is being pulled to the right over a rough surface. $T > f_k$, so the box is speeding up. Suddenly the rope breaks.

What happens? The box

- a) Slows steadily until it stops.
- b) Continues with the speed it had when the rope broke.
- c) Continues speeding up for a short while, then slows and stops.
- d) Keeps its speed for a short while, then slows and stops.
- e) Stops immediately.

Question #26

A box is being pulled to the right over a rough surface. $T > f_k$, so the box is speeding up. Suddenly the rope breaks.

What happens? The box

- a) Slows steadily until it stops.
- b) Continues with the speed it had when the rope broke.
- c) Continues speeding up for a short while, then slows and stops.
- d) Keeps its speed for a short while, then slows and stops.
- e) Stops immediately.

Question #27

A box is being pulled to the right at a steady speed by a rope that angles upward. In this situation:

- a) $N > mg$
- b) $N = mg$
- c) Not enough information to judge the size of the normal force
- d) $N = 0$
- e) $N < mg$

Quiz

A box is being pulled to the right at a steady speed by a rope that angles upward. In this situation:

- a) $N > mg$
- b) $N = mg$
- c) Not enough information to judge the situation
- d) $N = 0$
- e) $N < mg$

Question #28

A box is being pulled to the right by a rope that angles upward. It is accelerating. Its acceleration is:

a) $\frac{T}{m}(\cos \theta + \mu_k \sin \theta) - \mu_k g$

b) $\frac{T}{m}(\cos \theta - \mu_k \sin \theta) - \mu_k g$

c) $\frac{T}{m}(\sin \theta + \mu_k \cos \theta) - \mu_k g$

d) $\frac{T}{m} - \mu_k g$

e) $\frac{T}{m} \cos \theta - \mu_k g$

You'll have to work this one out. Don't just guess!

Quiz

A box is being pulled to the right by a rope that angles upward. It is accelerating. Its acceleration is:

a) $\frac{T}{m}(\cos \theta + \mu_k \sin \theta) - \mu_k g$

b) $\frac{T}{m}(\cos \theta - \mu_k \sin \theta) - \mu_k g$

c) $\frac{T}{m}(\sin \theta + \mu_k \cos \theta) - \mu_k g$

d) $\frac{T}{m} - \mu_k g$

e) $\frac{T}{m} \cos \theta - \mu_k g$

You'll have to work this one out. Don't just guess!

Drag

Air exerts a force on objects as they move through it.

The drag force direction is opposite to the object's velocity

Drag

What things do you think would affect the size of the drag force?

Drag

$$F_D = \frac{1}{2} \rho A C v^2$$

- A is the cross sectional area of the object
- ρ is the density of the air, which is about 1.2 kg/m^3 .
- C is the **drag coefficient**, which is a dimensionless number that depends on the shape of the object

Drag

A falling sphere
 $C \approx 0.5$

A cylinder falling end down
 $C \approx 0.8$

A cylinder falling side down
 $C \approx 1.1$

Question #29

Which is the correct free-body diagram for the man **immediately after** jumping out of the plane?

Question #29

Which is the correct free-body diagram for the man **immediately after** jumping out of the plane?

Question #30

Which is the correct free-body diagram for the man **a short time after** jumping out of the plane?

Question #30

Which is the correct free-body diagram for the man **a short time after** jumping out of the plane?

Question #31

Which is the correct free-body diagram for the man **a long time after** jumping out of the plane?

Question #31

Which is the correct free-body diagram for the man **a long time after** jumping out of the plane?

Question #31

Which is the correct free-body diagram for the man **a long time after** jumping out of the plane?

$$v_{\text{term}} = \sqrt{\frac{2mg}{C\rho A}}$$
