

PYTHON IS YOUR CALCULATOR

Pick one of the following homework problems and use Python to complete the calculations:

- 2.49 (weather rocket)
- 2.50 (weather rocket)
- 2.51 (rock dropped in pond)

These problems were chosen because they are a little longer and will require that you use python variables in your calculation.

Note: You may also count this problem towards your 15 points for the week but you must provide your hand-written work (picture, equations, thought process). In short, do the problem just the way you normally would, but use python for all of your calculations.
